

Incapacitance Tester

LF0812A

The Panlab INCAPACITANCE TESTER is used for measurement of pain and/or inflammation of the hind limbs on mice or rats. This offers relevant performances respect to the classical method: "Randall- Selitto Test"

It is configurated by two sensor plates where the sunjet leans its two hind limbs. Normally the weight is distributed fifty-fifty, but if there is an injured this relation change propoportinal to the lesion.

The animal is located in a confortable holder to prevent the stress for its handle.

SPECIFICATIONS

Resolution: 0,05 gr
Average: from 1 to 300 sec
Overpressure: 2.000 gr
Dimensions: 17 x 25 x 10 cm (control unit)
Weight: 3 kg
RS 232 (USB) output
Suitable for mice and rats, up to 500 gr
Holders for mouse and for rats
